PROFESSIONAL SUMMARY

C# | .NET | ASP.NET | Angular | Typescript | Sass | Tailwind | Next | SQL | Entity Framework | Docker | Azure

As a developer, I prefer a concise and coherent tech stack based on **Object-Oriented Programming (OOP)** principles. I work mainly with relational databases and prioritize **clean, well-structured, and scalable code**, with a preference for strongly typed languages. I **adapt quickly** to new technologies, environments, and methodologies, demonstrating a fast learning curve and a proactive attitude in facing technical and business challenges. Experienced with agile methodologies (Kanban), team collaboration, **git version control**, and best practices.

EDUCATION

Systems Analysis and Development
Uninter (JUL-2024 | DEC-2026)

Bachelor of Laws (LL.B.)
UCAM (JAN-2018 | DEC-2022)

EXPERIENCE

ConnectSea - Full Stack IT Intern (SEP-2025 | PRESENT)

I work on the development and maintenance of corporate solutions built with ASP.NET (.NET Framework 4.8) and Entity Framework. I am responsible for implementing new features, fixing bugs, and improving projects within a shared solution. I use Git daily for version control and Microsoft SQL Server for database management. On the front end, I work with Angular, including environment setup and integration using Docker.

ConnectSea - Full Stack IT Intern (SEP-2025 | PRESENT)

Started at the company working on the maintenance of corporate systems built with ASP.NET (.NET Framework 4.8). Responsible for bug fixing, creation of Razor Pages screens, and maintenance of database procedures. Demonstrated a fast learning curve in back-end and front-end integration (Angular), which led to full-time hiring and transition to more architecturally complex projects.

BTG Pactual Bank - Summer IT Intern (JUL-2025 | AUG-2025)

During the summer internship at BTG Pactual, participated in the development of the new procurement area of the MM Portal, an internal system that replaces a decentralized process with a centralized and more agile digital solution. Worked mainly on the front-end, building supplier-facing interfaces with Next.js, TypeScript, and Material UI, as well as dynamic tables and the initial implementation of a real-time chat using WebSockets. On the back-end, technologies included C#, JWT, Docker, and AWS Amplify. The platform aims to optimize negotiations, reduce approval time, and improve scalability.

Lojas Nalin - Software Development Intern (FEB-2025 | JUN-2025)

Developed and maintained Vue.js components for the company's internal system, implemented JWT authentication in Node.js/TypeScript APIs, optimized API endpoints, fixed front-end and back-end bugs, and performed code refactoring. Worked under agile methodologies (Kanban) with continuous deliveries and daily alignment meetings.
